                                                                                                                                                                                 viruses or related viruses or DNA proviruses in eg. biological samples. The proteins or peptides can be used for detection of antibodies induced in vivo and present in biological fluids. The DNA can also be used for the expression of LAV viral antigens for the prodn. of a vaccine against the detection of proteins related to the LAV viral entipodies for the prodn. of antibodies for the detection of proteins related to the LAV viruses, partic. for diagnosis of AIDS or pre-AIDS.
                                                     LAV EL % (AAN80436) and LAV MA L (AAN80437) were isolated from the peripheral blood lymphocytes of patients. Different AlDS virus isolates concerned are designated by 3 letters of the patients name. Stable probe including the DNA sequences can be used for detection of the new LAV

A genomic library was prepd. from DNA extracted from CIBM cells infected with the virus. The library was screened with a pBTl probe corresp. to a fragment from HIV 1. The virus is more cytopathic than other strains and is not inhibited by OKT4A. It has been deposited as CNCM I-857. The sequence can be used to express proteins useful for diagnosing the presence of NDK and related viruses and in vaccines against immunodeficiency diseases. See also AAR09301-4.

                                                           Retief J.D., Krajewski C., Westerman M., Winkfein R.J., Dixon G.H.;
"Molecular phylogeny and evolution of marsuplal protamine Pl genes.";
Proc. R. Soc. Lond. B, Biol. Sci. 259:7-14(1995).
-1- FUNCTION: PROTAMINES SUBSTITUTES FOR HISTONES IN THE CHROMATIN OF
SPERM DURING THE HAPLOID PHASE OF SPERMATOGENESIS. THEY COMPACT
SPERM DNA INTO A HIGHLY CONDENSED, STABLE AND INACTIVE COMPLEX.
-1- SUBCELLULAR LOCATION: NUCLEAR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Retief J.D., Krajewski C., Westerman M., Winkfeln R.J., Dixon G.H.;
"Molecular phylogeny and evolution of marsuptal protamine P1 genes.";
Proc. R. Soc. Lond., B. Biol. Sci. 259;7-14(1995).
-!- FUNCTION: PROTAMINES SUBSTITUTES FOR HISTONES IN THE CHROMATIN OF
SPERM DURING. THE HAPLOID PHASE OF SPERMATOGENESIS. THEY COMPACT
SPERM DIA INTO A HIGHLY CONDENSED, STABLE AND INACTIVE COMPLEX.
-!- SUBCELLULAR LOCATION: UNCLEAR.

-I- FUNCTION: PROTAMINES SUBSTITUTES FOR HISTONES IN THE CHROMATIN OF
SPERM DURING THE HARLOID PHASE OF SPERMATOGENESIS. THEY COMPACT
SPERM DNA INTO A HIGHLY CONDENSED, STABLE AND INACTIVE COMPLEX.
-I- SUBCELLULAR LOCATION: UNCLEAR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

(Species: Sus scrofa domestice)
(Species: Sus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 3
557609
Protegrin 5 precursor - pig
N.Alternate names: cathelin-associated antimicrobial peptide
C.Species: Sus scrofa domestica (domestic pig)
C.Accession: S6688; S57609
R.Zhao, C.; Ganz, T.; Lehrer, R.I.
FEBS Lett. 368, 197-202, 1995
A.;Title: The structure of porcine protegrin genes.
A.;Reference number: S66283; MUID:95354835
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A Residues: 1-149 < ZHA>

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Protegrin 3 precursor - pig
NyAlternate names: neutrophil peptide 2
Cispecies: Sus scrofa domestica (domestic pig)
Cispecies: Sus scrofa domestica (domestic pig)
Cispecies: Sus scrofa domestica (domestic pig)
Cispecia: Sus scrofa domestica (domestic pig)

Dypothetical protein APE0571 - Aeropyrum pernix (strain K1)
C;Species: Aeropyrum pernix
C;Stacession: C72642
R;Kawarabayasi, X; Hino, Y; Horikawa, H; Yamazaki, S; Haikawa, Y; Jin-no, K; Takahawa, H; Takahaya, M; Masuda, S; Funahashi, T; Tanaka, T; Kudoh, Y; Yamazaki, J; M
DNA Res. 6, 83-101, 1999
A;Title: Complete genome sequence of an aerobic hyper-thermophilic Crenarchaeon, Aeropyr
A;Reference number: A72450; MUID:99310339
A;Accession: C72642
A;Acc
aninopeptidase (EC 3.4.11.-) - Indian meal moth
C.Species: Plodia interpunctella (Indian meal moth)
C.Species: Plodia interpunctella (Indian meal moth)
C.Accession: T3094
R; Zhu, Y.C.; Oppert, B.; Kramer, K.J.; McGaughey, W.H.; Dowdy, A.K.
Bubinited to the EMBL Data Library, November 1997
A; Description: Molecular comparison of aminopeptidase cDNAs and gene structure between the A; Reference number: Z20942
A; Accession: T30943
A; Accession: T30943
A; Status: preliminary
A; Molecular type: mRNA
A; Residues: 1-1016 < ZNANA
A; Residues: 1-1016 < ZNANA
A; Residues: 1-1016 < ZNANA
A; Cross-references: EMBL: ARONA minopeptidase
C; Superfamily: membrane alanyl aminopeptidase
C; Keywords: alpha-aminoacylpeptide hydrolase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This peptide represents a linear derivative of the protegrin family of peptide antibiotics. Protegrin antibiotics form part of the peptide antibiotics family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the addisulphide bridge. The newell derivatives are linear and lack the agents to an organism. e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonucleotides, ribozymes, antitumour agents, and intivirals and anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammalian cell membranes rapidly by a passive including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ő
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The specification describes a pharmaceutical composition, which comprises at least one anticancer agent associated with at least one peptide that can transport it into cancer cells and which inhibits development of resistance to the anticancer agent. By using the peptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, marticularly produced by chemical synthesis, can be coupled easily to the agent, cross anamalian cell membranes rapidly by a passive mechanism (no receptors required), and are non-toxic and non-lytic. The compositions are used to treat cancer. The present sequence represents a peptide which may be linked to the anticancer agents of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New composition useful for cancer treatment and prevention, contains anticancer agent and peptide vector that transports agent into cells

Protegrin antibiotics form part of the peptide antibiotics family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the agents to an organism, e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonucleotides, ribozymes, antibudies antitumour agents, antivirals and anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammalian cell membranes rapidly by a passive including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

The invention relates to the use of linear peptides, coupled to an active agent, to prepare a composition able the cross the blood-brain barrier for diagnosis or treatment of disorders localised in the central nervous system. The linear peptide preferably has the formula: (a) X1-X16; are amino acids (aa), of which 6-10 of them are hydrophobic and X0 must be Trp; each B is an acntaining a side chain that includes a basic group; and each X is an aliphatic or aromatic aa. The linear peptide may be retro forms of (a)-(c) containing D and/or L-form aa, or a fragment containing at least 7 consecutive aa from (a)-(c). Peptides able to cross the BBB include protegrins, Antennapedia, reptyplesins, transportan, etc. Of these several families have cytolytic effects and are termed peptide antibiotics. They fall into 3 main categories based on their structure: (i) peptides with disulphide bond-linked beta-sheets, e.g. protegrin, tachyplesins, defensins; (ii) peptides with alpha-helices, beta-sheets, e.g. protegrin, tachyplesins, defensins; (iii) peptides with the presence of fall into the peptide antibiotic categories defined above: (a)-peptides are based on the Antennapedia family peptides; (b)-peptides are based on creptesents as synthetic linear peptide designed on peptides are based on the BBB and is conjugated to a doxorubicin molecule by a succipate.
                                                                                                                                                                                   Cytostatic; neurodegenerative; antidepressant; analgesic; antimicrobial; blood-brain barrier; diagnostic; central nervous system; protegrin; Antennapedia; tachyplesin; peptide antibiotic; Alzheimer's disease; cancer; Parkinson's disease; depression; pain; meningitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Conjugates of the linear peptides and the active agent are particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     linker. The peptide may also be linked to a benzylpenicillin molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Use of linear peptides as vectors for active ingredients, useful for diagnosis and treatment of central nervous system diseases, can transport agents passively across the blood-brain barrier .
                                                                                                                                                                                                                                                                                                                                                                _note= "linked to doxorubicin via a succinate
(-CO-(CH2)2-CO-) linker; optionally linked
to benzylpenicillin by a glycoamide linker"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                used to treat, prevent or diagnose brain cancer, Alzheimer's or
Parkinson's diseases, depression, pain and meningitis, but also for
studying drug behaviour in BBB models.
                                                                                                                                             Protegrin-like peptide antibiotic Doxo-SynBl.

The linear peptide may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to the use of linear peptides, coupled to an active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               retro forms of (a)-(c) containing D- and/or L-form as, or a fragment containing at least 5, preferably at least 7 consecutive as fragment containing at least 5, preferably at least 7 consecutive as fragment containing at least 5, preferably at least 7 consecutive as from (a)-(c). Peptides able to cross the BBB include protegrims, Antennapedia, tansportan, etc. Of these several families have cytolytic effects and are termed peptide antibiotics. They fall into 3 main categories based on their structure: (i) peptides with alpha-helices, e.g. cerropins and maganins; (ii) peptides with disulphide bond-linked beta-sheets, e.g. protegrin, tachyplesins, defensins; (iii) peptides with no major structure but containing bends due to the presence of pro-residues, e.g. bactericins and RR39: The peptides of the invention fall into the peptide antibiotic categories defined above: (a)-peptides are based on

protegrins; and (c)-peptides are based on tachyplesins. This sequence the BBB and is conjugated to a dalargin molecule by a disulphide linker. Conjugates of the linear peptides and the active agent are particularly used to treat, prevent or diagnose brain cancer, Alzheimer's or Parkinson's diseases, depression, pain and meningitis, but also for studying drug behaviour in BBB models.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The specification describes a pharmaceutical composition, which comprises at least one anticancer agent associated with at least one peptide that can transport it into cancer cells and which inhibits development of resistance to the anticancer agent. By using the peptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, particularly produced by chemical synthesis, can be coupled easily to the agent, performed by chemical synthesis, can be coupled easily to the agent, receptors required), and are non-toxic and non-lytic. The compositions are used to treat cancer. The present sequence represents a peptide which may be linked to the anticancer agents of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New composition useful for cancer treatment and prevention, contains anticancer agent and peptide vector that transports agent into cells

```
The present sequence is an antimicrobial protegrin peptide, which has a broad spectrum of activity against microbial targets, including gram positive and gram negative bacteria, yeast, fungi, protozoa and certain strains of viruses and retroviruses, e.g. HIV.

It can be used to preserve or disinfect a variety of materials, including medical equipment, foodstuffs, cosmetics, contact lens solutions, medicaments or other nutrient containing materials. It infections or diseases in plants and animals, e.g. conjunctivitis, can also be used for the prophylaxis or treatment of microbial cartitis, corneal ulcers, stomach ulcers associated with seriatis, corneal ulcers, stomach ulcers associated with sepsis, endocarditis, pneumonia and other respiratory infections, urinary tract infections, systemic candidiasis and oral mucositis.

It is biostatic or biocidal against clinically relevant pathogens carbibiting multi-drug resistance, e.g. vancomycin resistant stephylococcus care december of according methicillin resistant Staphylococcus aureus (MRSA). It is given at a dosage of 0.1 to 5, preferably 0.5
                                                                                                                                                                                                disinfection; prophylaxis; treatment; infection; disease; conjunctivitis; keratitis; corneal ulcer; stomach ulcer; STD; enjunctivitis; keratitis; corneal ulcer; stomach ulcer; STD; Helicobacter pylori; sexually transmitted disease; oral mucositis; gram-negative sepsis; endocarditis; pneumonia; blocidal; biostatic; respiratory infection; urinary tract infection; MRSA; protozoan; pensiratory insesistant Enterococcus; pathogen; multi-drug resistance; penicillin resistant Streptococcus pneumoniae; pig; porcine; methicillin resistant Straphylococcus aureus; systemic candidiasis.
                                                                                                                                       Antimicrobial protegrin; broad spectrum; gram-positive; bacterium; gram-negative; bacteria; yeast; fungus; fungi; protozoa; virus; retrovirus; HIV; human immunodeficiency virus; preservation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antimicrobial protegrin peptide(s) - having activity against bacteria, yeast, fungi, protozoa and certain strains of viruses (e.g. HIV)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           recombinantly produced, corresponding to the generic formula:

A1-A2-A3-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18)

where A1 = a basic amino acid; A2 and A3 = a small amino acid; A4 = a

basic or small amino acid; A5, A7 and A14 = a hydrophobic amino acid;
A9, A12 and A16 = a basic, hydrophobic, neutral/polar or small amino

acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino

acid or proline; A17 may be absent or a basic, neutral/polar,

hydrophobic or small amino acid; and A18 may be absent or a basic,

neutral/polar, hydrophobic or small amino acid. This has a charge of at

least +3 and its N-terminal acylated and/or C-terminal amidated or

esterified forms, all of which may contain a disulphide bond to give a

cystellne bridge. Peptides of this formula are designated protegrins and

are useful as anti-bacterial, anti-viral and anti-fungal agents in
                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is a specifically claimed example of a peptide,

plants and animals. The protegrins confer resistance to microbial or viral infection in plants by preventing the growth of a virus or microbe and inactivate the endotoxin of gram-negative bacteria. The protegrins are particularly useful for the treatment of sexually transmitted disease caused by microorganisms e.g. Candida albicans, HIV-1, Chlamydla trachomatis, Treponema pallidum and Neisseria gonorrhoeae. They can also be used in eye care solutions and as preservatives for food. The protegrins are more effective under physiological conditions (e.g. in the presence of serum) than certain antibiotics and are non-toxic to the cells of higher organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

where Al = a basic amino acid; A2 and A3 = a small amino acid; A4 = a basic or small amino acid; A5, A7 and A14 = a hydrophobic amino acid; A9, A12 and A16 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; and A18 may be absent or a basic, hydrophobic or small amino acid; and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; This has a charge of at least +3 and its N-terminal acylated and/or C-terminal amidated or esterified forms, all of which may contain a disulphide bond to give a cre useful as anti-bacterial, anti-viral and anti-fungal agents in plants and animals. The protegrins confer resistance to microbial or viral infection in plants by preventing the growth of a virus or microbe and inactivate the endotoxin of gram-negative bacteria. The protegrins are particularly useful for the treatment of sexually transmitted disconnatis, Treponema pallidum and Neisseria gonorchocae. They can also be used in eye care solutions and as preservatives for food. The conference of serum) than certain antiblotics and are non-toxic to the cells of higher organisms.

The presum: Sequence is a specificatly cialmed example on a peptide, the presum: Sequence is a specification of the generic formula:

Al-A2-A3-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18)

Where A1 = a basic amino acid; A2 and A3 = a small amino acid; A9, A12 and A16 = a basic, hydrophobic, meutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, meutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, meutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, meutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, meutral/polar, hydrophobic or small amino acid; A10 and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; A10 and A18 may be absent or a basic, hydrophobic or small amino acid; A10 and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid. This has a charge of a clast +3 and its N-terminal acylated and/or C-terminal amidated or seterified forms, all of which may contain a disulphide bond to give a cystine residues are replaced by a hydrophobic, small or give a cystine residues are replaced by a hydrophobic, small or diright and are useful as anti-bacterial, anti-viral and anti-fungal agents in plants and animals. The protegrins of growth of a virus or microbe and inactivate the endotoxin of gramnestance to microbial or viral infection in plants by preventing the treatment of sexually transmitted disease caused by microorganisms e.g. Candida albicans, HIV-1, Chlamydia trachomatis, Treponema pallidum and as preservatives for food. The protegrins are more effective under physiological conditions (e.g. in the presence of serum) than certain antibiotics and are non-toxic to the cells of higher organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
present sequence is a specifically claimed example of a peptide,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Candida albicans; gram-negative bacteria; STD;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAR78751
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δ
                                                                                       The present sequence is a specifically claimed example of a peptide, recombinantly produced, corresponding to the generic formula:

A1-A3-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-A17-A18)

where A1 = a basic amino acid; A5, A7 and A14 = a hydrophobic amino acid; A6 and A14 = a hydrophobic amino acid; A7 and A14 = a hydrophobic amino acid; A7 and A14 = a hydrophobic amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A18 may be absent or a basic, hydrophobic or small amino acid; A10 and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; A10 and A18 may contain a disulphide bond to give a cleast 43 and its N-terminal acylated and/or C-terminal amidated or settified forms, all of which may contain a disulphide bond to give a cysteine residues are replaced by a hydrophobic, small or large polar anion acid (e.g. alanine in this case). Peptides of this formula are call the cystance do protegrins and are useful as anti-bacterial, anti-viral and anti-fungal agents in plants and animals. The protegrins confer creatment of a virus or microbe and inactivate the endotoxin of gramners and autiched albicans, HIV-1. Chlamydia trachomatis, Treponema pallidum and Nesseria gonorrhoeae. They can also be used in eye care solutions and asserial condition of the protegrins are more effectives under a pallidum and nesserial gonorrhoeae. They can also be used in eye care solutions are asserved to the protegrins are more effectives or an expective of a secondarion of the care more effectives or an expective or also the protegrins are more effectives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

The present sequence is a specificative training the period of the generic formula:

Al-A2-33-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18)

Where all a basic amino acid; A2 and A3 = a small amino acid; A9, A12 and A16 = a hasic, hydrophobic, neutral/polar or small amino acid;
A9, A12 and A16 = a basic, hydrophobic, neutral/polar or small amino acid;
A9, A12 and A16 = a basic, hydrophobic, neutral/polar or small amino acid;
A9, A12 and A16 = a basic, hydrophobic, neutral/polar, hydrophobic or small amino acid; and A18 may be absent or a basic, hydrophobic or small amino acid; and A18 may be absent or a basic, hydrophobic or small amino acid; and A18 may be absent or a basic, hydrophobic or small amino acid; and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; and A18 may be absent or a basic, contextral/polar, hydrophobic or small amino acid; and A18 may be absent or a basic, contextral/polar, hydrophobic, small of which may contain a disulphide bond to give a cysteine bridge. This peptide is in snake form where all the cysteine bridge. This peptide is in snake form where all the canno acid (e.g. alanine in this case). Peptides of this formula are designated protegrins and are useful as anti-bacterial, anti-viral and anino acid (e.g. alanine in this case). Peptides of this formula are context of mino acid gents in plants and anino acid confer resistance to microbial or viral infection in plants by preventing the growth of a virus or microbe and inactivate the endotoxin of gramrestament of sexually transmitted disease caused by microorganisms ergonorrhoeae. They can also be used in eye care solutions and as preservatives for food. The protegrins are more effective under physiological conditions (e.g. in the presence of serum) than certain antibiotics and are non-toxic to the cells of higher organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is a specifically claimed example of a peptide,

"protegrins". The

```
peptides are useful as antibacterial, antiviral and antifungal agents in both animals and plants. The peptides are 16-18 amino acids in length and are characterised by four invariant Cys residues at positions 6, 8, 13 and 15 and either (1) by a characteristic pattern of basic and hydrophobic amino acids and/or (2) being isolatable from animal (e.g. pyrchhobic amino acids and/or (2) being isolatable from animal (e.g. cys residues is/are replaced by Mydrophobic or small amino acids. The perchies can be produced synthetically and some can be produced recombinantly or can be isolated and purified from their native sources. The peptides can be modified by N-acylation and/or C-terminal amidation acid residues can be present.

The present sequence is a specific example of the protegrin relative sources and residues can be present.

The present sequence is a specific example of the protegrin relative sources and real acid residues can be present.

The present sequence is a specific example of the protegrin relative sources and real acid residues in which Cys(6, 8, 13, 15) have all been replaced by Ser.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antimicrobial protegrin; broad spectrum; gram-positive; bacterium; gram-negative; bacteria; yeast; fungus; fungi; protozoa; virus; retrovirus; HIV; human immunodeficiency virus; preservation; disinfection; prophylaxis; treatment; infection; disease; conjunctivitis; keratitis; corneal ulcer; stomach ulcer; STD; Helicobacter pylori; sexually transmitted disease; oral mucositis; gram-negative sepsis; endocarditis; pneumonia; biocidal; biostatic; respiratory infection; urinary tract infection; MRSA; protozoan; vancomycin resistant Enterococcus; pathogen; multi-drug resistance; penicillin resistant Streptococcus pneumoniae; pig; porcine; methicillin resistant (Staphylococcus aureus; systemic candidiasis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            or esterification, and can be in linear or cystine-bridged form. D-Amino acid residues can be present.

The present sequence is a specifically claimed example of the protegrins, designated PG-1. It can be synthesised; or it can be isolated from porcine leukocytes, in which case it is in amidated and in dicystine bridged form. A synthetic version in which all the amino acids have D-configuration is also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                       New peptides are disclosed which are designated "protegrins". The peptides are useful as antibacterial, antiviral and antifungal agents in both animals and plants. The peptides are 16-18 amino acids in length and are characterised by four invariant Cys residues at positions 6, 8, 13 and 15 and either (1) by a characteristic pattern of basic and portine) amino acids and/or (2) being isolatable from animal (e.g. portine) leukocytes; or analogues of these peptides in which 1-4 of the peptides can be produced synthetically and some can be produced recombinantly or can be isolated and purified from their native sources. The peptides can be modified by Nacylation and/or C-terminal amidation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

The present sequence is an antimicrobial protegrin peptide, which has a broad spectrum of activity against microbial targets, including gram-positive and gram-negative bacteria, yeast, fungi, protozoa and certain strains of viruses and retroviruses, e.g. HIV.

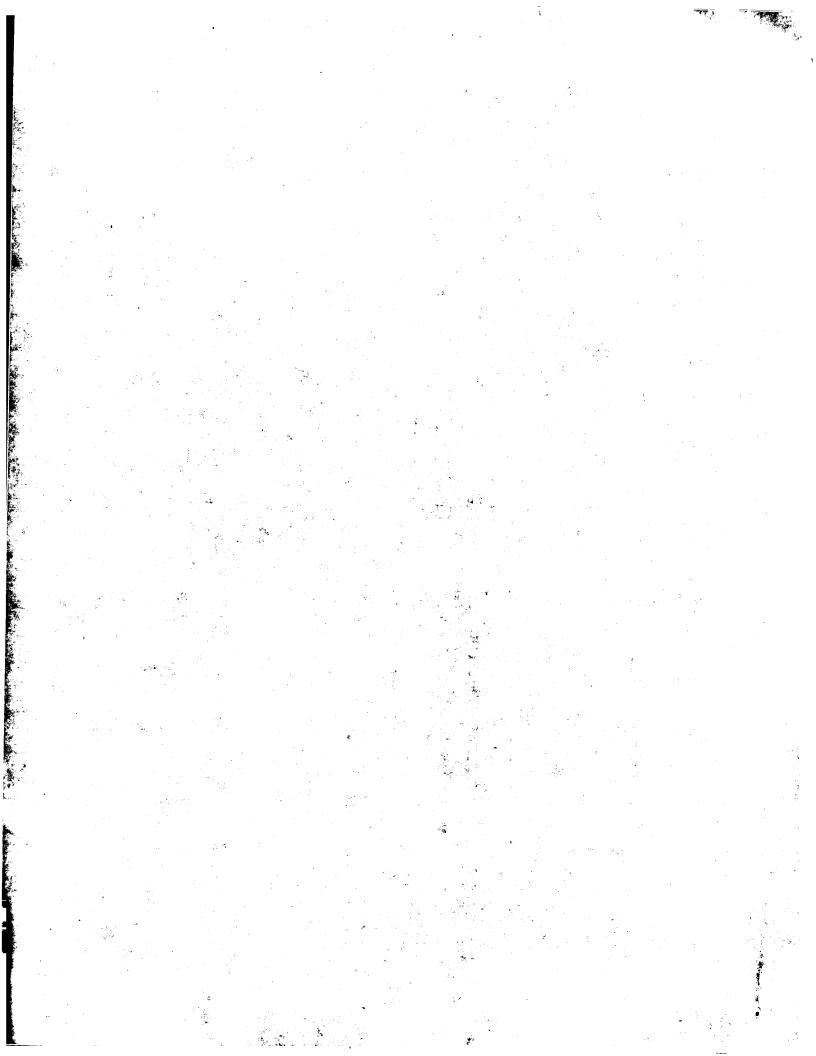

It can be used to preserve or disinfect a variety of materials, including medical equipment, foodstuffs, cosmetics, contact lens solutions, medicaments or other nutrient containing materials. It can also be used for the prophylaxis or treatment of microbial infections or diseases in plants and animals, e.g. conjunctivitis, keratitis, corneal ulcres, stomach ulcrers associated with Helicobacter pylori, sexually transmitted diseases, gram-negative sepsis, endocarditis, pneumonia and other respiratory infections, urinary tract infections, systemic candidiasis and oral mucositis. It is blostatic or blooidal against clinically relevant pathogens exhibiting multi-drug resistance, e.g. vancomych resistant can be interococcus faccilis, penicillin resistant Staphylococcus are ureus (MRSA). It is given at a dosage of 0.1 to 5, preferably 0.5 to 1 mg/kg/day, by injection.
                                                                                                                                                                                               New antimicrobial protegrin peptide(s) - having activity against bacteria, yeast, fungi, protozoa and certain strains of viruses (e.g. HIV)
